DEPARTMENT OF PAEDIATRIC CARDIAC SCIENCES DISCHARGE SUMMARY

Patient Name Master Vansh Arya **Episode No.** IP01599809

Child was admitted with the above complaints.

He was taken for the cath for the PDA device closure. After obtaining vascular access through the right femoral vein (6F sheath) and right femoral artery (5F sheath), intravenous heparin was administered at a dose of 50 U/kg. Angiographic assessment demonstrated a small PDA measuring approximately 3mm with a well-formed ampulla. The PDA was crossed successfully and an 8x6 mm Meril PDA occluder device was deployed across the ductus without difficulty. Post deployment echo showed no residual flow across the PDA with preserved flow in the branch pulmonary arteries and descending aorta. The patient remained hemodynamically stable throughout the procedure and was shifted to the PCS recovery area in the stable condition.
